## A Resource for Maternal, Infant, and Early Childhood Home Visiting Program Awardees

### Module 2: Developing Run Charts

Cherryville Home Visiting Center identified increasing depression screening rates as its CQI topic. The following data reflect the depression screening rates for each month in the past year. Plot the screening data on the blank run chart provided below.

Month	Percentage of Newly Enrolled Caregivers Screened	Month	Percentage of Newly Enrolled Caregivers Screened
January	19	July	38
February	24	August	66
March	18	September	78
April	18	October	97
May	34	November	95
June	42	December	98

Describe your interpretation of the run chart in the space below. Be sure to include possible reasons for the change in screening rates for May, August, and October. If you need more space, use the back of this sheet.
